1 Description of Device

1. Moving Head
2. Carrying handles
3. LED- Display (Data entry)
4. Head locking system (one-sided in 45° steps)
5. Camlock mounting system

6. Software-Update connector
7. Microphone- Intensity
8. DMX- Input
9. DMX- Output
10. Fan (air inlet/outlet)
11. Fuse electronics
12. Mains supply (Powercon)
13. Power On/Off
14. Fuse lamp
15. Carrying handles
1.1 Safety Instructions

> The **YPOC 700** is a High-Tech Product. To guarantee a smooth operation, it is necessary to respect the following rules.
> The manufacturer of this device will not take responsibility of damages through disregard of the information in this manual. Warranty claims will be cancelled.

1. Make sure before putting into operation, that the fan and the air inlets are clean and not blocked by anything.

2. **Attention:** Don't touch the device during the operation. This can cause injuries or damages.

3. **Unplug the YPOC 700 from the AC outlet before any service.**

4. It is necessary to wait at least 30 minutes after disconnecting the AC before you open the **YPOC 700**. Please do not touch the bulb of the lamp if you are not absolutely sure it is cold.   **-- Danger of BURNING --**

5. Never look directly into the beam of the lamp. You risk injury of your retina and blindness.

6. Pay attention of the maximum lamp operation time. You have to change it if the lamp shows any deformations or damages. The same is with all glass components, color filters, lenses and mirrors.

7. To allow a secure operation, follow also the Installation guide described in chapter 2. Operating the **YPOC 700** without suited safety aids like Safety cables or clamps/hooks can increase the risk of an accident.

8. The installation should be done by qualified staff only. You need to pay attention to the common rules of technology that are not explicit mentioned in this manual.

9. Use only original spare parts. Any structural modification will cancel all warranty claims.

10. This device is equipped with a Head locking system. Make sure that before switching on the system is unlocked. Check also that the device can rotate and operate in his entire movement area.

2   Preparation and Installation

2.1   Mounting

The **YPOC 700** is fully operational whether it hangs or is mounted to the wall. It can also be operated while standing on the floor. Keep a safety distance of 0.5 m towards any easily inflammable materials (decoration etc.).
⚠	**Pay attention to the regulations of: BGV C1 (former VBG 70) and DIN VDE 0711-217.** **The installation should be done by qualified staff only.**

For mounting and service purposes this device is equipped with a Head locking system which allows you to lock the head in 45° steps. Push the lock button on the side of the arm to lock and unlock the system.

Attention: Make sure that before switching on the system is unlocked. Check also that the device can rotate and operate in his entire movement area.

2.1.1   Clamps

There are two major possibilities to mount the **YPOC 700** together with clamps. Camlock system or direct mounting of clamps. In both cases you have to regard a sufficient stability of the system. For installation instructions please see also printing on the bottom side of the case.

a) Camlock system: This system allows you a fast and efficient setup of clamps. Attach the two camlocks to designated position (C1 and C2) on the bottom side of the case and close the locks by turning them 90°. Verify the secure fit of the camlock system. The clamps themselves are directly attached permanently on the camlocks.
b) Use two clamps direct on the bottom side of the **YPOC 700** to mount the unit on a truss (each two opposite threads A1 -A4 or A2 - A3, use screws M10 max. length 50 mm). Distances, diameters and positions can also been seen on the printing on the bottom plate of the system.

2.2 Secure the *YPOC 700*

Regardless of the rigging of the **YPOC 700** you have to use a stipulated safety wire. Therefore you have to pull the safety wire through to two provided holes on the bottom side of the fixture and connect it with the truss-support. Pay attention to a safe and proper fastening. Install a safety wire that can hold at least 10 times the weight of the fixture. Never use the carrying handles for this purpose.

2.3 Connections

2.3.1 Power supply

Electronic ballast with:

~90 - 260 Volt, 50 - 60 Hz, earth contact type plug - Powercon

Connected load 1000W <=> 4.5 A (blind current compensation).

Please see printing on the case for the right electronic supply!

2.3.2 DMX

USITT DMX 512 Standard input/output, 3 pole connectors.

[+] = Pin 3 / [-] = Pin 2 / [Ground] = Pin 1

The DMX- Addressing starts at the DMX- Address [001].

See also printing on the case for the right pin assignment.

2.4 Fuses

The **YPOC 700** electronic system is protected by two 5x20 mm fine-wire fuses.

Lamp: 230V / T 5A   Lamp: 115V / T 10A

Electronic: 230V / T 1A   Electronic: 115V / T 2A

Attention:

- **Disconnect AC outlet before changing a fuse!**

- **Use only the original declared fuse type!**

3   The Menu Field

You'll find the control board on the side part of the base. It allows you to make all necessary adjustments of the **YPOC 700.** With the **Mode**-key you get into the main menu. Afterwards you can navigate through the menu with the **Up/Down**-keys. Push the **Enter**-key to get in the next menu level or to confirm your settings. Make them and set functions **ON/OFF** with the **Up/Down**-keys. Confirm and save it with the **Enter**-key (the display shows *OK*). Push the **Mode**-key to cancel the entry and go back to the main menu.

MODE   ENTER   DOWN   UP

Display

← DOWN - UP →
Level 1	Level 2	Level 3	Remark
D001			Define the DMX start address
TEST			Test program of all functions
AUDI	ASLW		Self-running audio program (slow)
	AFST		Self-running audio program (fast)
	MSTR		Master for the audio program
	SVPT		Basic position for the audio program
	SIZE		Size for the audio program (NORM-BIG-MIDL-SMAL)
LAMP			Switch on/of the lamp direct at the **YPOC 700**
RESE			Reset
TIME	POWR		Running time of the fixture (no destructible)
	LA1		Running time of the lamp (erasable)
	LA2		Running time of the lamp (no destructible)
RPAN			Reverse Pan-direction
RTLT			Reverse Tilt-direction
DMOD	NORM		DMX Mode: Defines the number of DMX channels
	EXT		DMX Mode *NORM* has to be selected at the moment.
SPEC	MANU		Manual drive of all device functions
	LAAU		Automatic lamp start at switching on the unit
	DLOF		Switch off lamp via DMX
	DMXI		Read out actual DMX-values
	DISP	D ON	Display On/Off
		REV	Twist the display (also pushing Up/Down keys at the same time)
	TEMP		Read out internal temperature
	FANS	HIGH	Maximum cooling fan velocity
		REG	Automatic cooling fan control
		LOOF	Low cooling fan speed → lamp off
		LOHI	Low cooling fan speed → Automatic
	VERS	VTIL	Software version Tilt-board
		VTR1	Software version driver board 1
		VTR2	Software version driver board 2
		VTR3	Software version driver board 3
		DBUG	Function not yet in use

ADJU	CODE XXXX	Use the code for entering the calibration menu (for authorized persons only)
	CL1C	Coarse calibration of color wheel 1 (CTO)
	CL1F	Fine calibration of color wheel 1 (CTO)
	CL2C	Coarse calibration of color wheel 2 (CTO)
	CL2F	Fine calibration of color wheel 2 (CTO)
	GOB1	Calibration of gobo wheel 1
	GOB2	Calibration of gobo wheel 2
	GOB3	Calibration of gobo wheel 3
	SHSC	Shutter moves pair wise open and close
	SHOC	Shutter moves pair wise parallel left and right
	FR U	Calibration of frost filter A
	FR O	Calibration of frost filter b
	PRIS	Calibration of prism wheel
	IRIS	Calibration of iris
	FOCU	Calibration of focus
	POFS	Calibration of Pan-Offsets
	TOFS	Calibration of Tilt-Offsets
	CLRE	Settings in the internal memory (super-user only)
	SPFS	Speed fast - limit the max. Pan velocity to 70%
	ARES	Adjust Reset (all wheels stand still after a reset)
DFSE		Call on the default function values
FEED		Pan/Tilt feedback (error correction) On/Off
EFLG		Correction of faults

3.1 Adjust the DMX- Address (D001)

A rest will be performed right after switching on the **YPOC 700** (the display shows the following information: GLP - Y700 - software version of the unit - *YSTD* for standard module/Spot setup or *YCMY* for CMY module/CMY setup). The reset can last up to 30 seconds. Afterwards the current DMX- Address is shown. If there is no DMX- Signal the display flashes.

```
D001
```

For setting the address please follow this procedure:

1. Switch On the **YPOC 700** and wait until the fixture reset has finished ('*RESE*' is flashing in the display).

2. Press the **Mode**-key in order to access the main menu. Browse through the menu by pressing the **Up/Down**-keys until the display shows *D001*. Confirm by pressing the **Enter**-key (the decimal point is flashing)

3. Use the **Up/Down**-keys to select the desired address. Confirm the setting by pressing the **Enter**-key (the display shows *OK*) or press the **Mode**-key to cancel.

The DMX- Address is stored also while switching off the **YPOC 700!**

3.2 The Test Program (TEST)

TEST

The **Test**-Program allows you to run a complete self test procedure of all functions. Press **Enter** to confirm or **Mode** to cancel.

(not available in the present software version)

3.3 The Audio Program (AUDI)

The **Audio**-menu allows you to run a stand alone audio program. This chaser can run either fast or slow. AFST: Every sound impulse on step of the chaser. ASLW: Every second sound impulse one step of the chaser.

Additionally you can choose a basic position for this audio chaser. Use either the internal manual mode or an external controller to set the desired Pan/Tilt position. Confirm this setting in the SVPT menu by pressing the **Enter**-key.

You can also define the size of the audio chaser in the SIZE menu. You have the choice between: NORM (no basic position has to bee chosen), BIG, MIDL and SMAL).

If you want to run the systems simultaneously, one of the **YPOCs** must be switched as the master. All others must be "Slave" Master = OFF. **Notice:** The Audio function is only working if **no** DMX signal is connected. This Audio program can work on small events or as an emergency program.

3.4 Lamp On/Off (LAMP)

LAMP

Use the **Up/Down**-keys to select lamp ON or lamp OFF Press **Enter** to confirm or **Mode** to cancel and return to the main menu. (The lamp OFF command is only functioning if the shutter is closed at the same time. Use an external controller or the manual drive mode, see 3.9.1).

3.5 Reset (RESE)

RESE

Press the **Enter**-key to run a reset of all fixture functions (RST is shown in the display). **Performing a Reset will last approximately 30 seconds.**

3.6 *Running time of lamp and unit* (TIME)

TIME

With this function you can read out three different running times of the fixture.

POWR	Complete running time of the fixture (non-erasable).
LA 1	Running time of the lamp (erasable). Push the **Up/Down**-keys at one time to delete this running time.
LA 2	Running time of the unit with lamp on (non-erasable).

3.7 *Invert Pan Movement* (RPAN)

RPAN

This function allows you to invert the Pan movement. Use the **Up/Down**-keys to select invert ON or OFF. Press **Enter** to confirm or **Mode** to cancel and return to the main menu.

3.8 *Invert Tilt Movement* (RTLT)

RTLT

This function allows you to invert the Tilt movement. Use the **Up/Down**-keys to select invert ON or OFF. Press **Enter** to confirm or **Mode** to cancel.

3.9 *Special Functions* (SPEC)

SPEC

This menu allows you to reach further special functions of the **YPOC 700.**

In detail they are:

3.9.1 *Manual Drive* (MANU)

MANU

This function allows you to drive all fixture functions manually. Select the desired function with the **Up/Down**-keys and confirm with **Enter**. Now choose the desired value with the **Up/Down**-keys and confirm again with **Enter** or cancel and return to the menu with the **Mode**-key.

Attention: The DMX cable must be disconnected during this operation.

Function	Value	Remark
PAN	000 - 255	Pan Position
TILT	000 - 255	Tilt Position
COL1	000 - 255	Color wheel 1
COL2	000 - 255	Color wheel 2
GOB1	000 - 255	Gobo wheel 1
GRT1	000 - 255	Gobo wheel 1 rotation
GOB2	000 - 255	Gobo wheel 2
GRT2	000 - 255	Gobo wheel 2 rotation
GOB3	000 - 255	Gobo wheel 3
SHUT	000 - 255	Shutter / Strobe function (the lamp strikes at DMX 255 if dimmer is "open" = DMX 255)
DIMR	000 - 255	Dimmer
FOCU	000 - 255	Focus
ZOOM	000 - 255	Zoom
FRST	000 - 255	Frost
PRIS	000 - 255	Prism (000 – 127) / Stop / Prism- rotation
IRIS	000 - 255	Iris
SPEC	000 - 255	Lamp Off, Reset, ...
MOVE	000 - 255	Movements
SPED	000 - 255	Speed for Pan/Tilt

3.9.2   Lamp On automatically (LAAU)

LAAU

This function enables to strike the lamp automatically after switching on the fixture. Use the **Up/Down**-keys to select ON if you want to strike the lamp automatically after switching on the fixture or OFF if you don't want this function. Press **Enter** to confirm or **Mode** to cancel and return to the menu.

If you have chosen OFF you have the possibility to strike the lamp either via DMX or direct at the **YPOC 700** in the Lamp menu.

3.9.3   Lamp Off via DMX (DLOF)

DLOF

This function enables to switch off the lamp via DMX or not. Use the **Up/Down**-keys to select ON if you want to switch off the lamp via DMX or OFF if you don't want this function. Press **Enter** to confirm or **Mode** to cancel and return to the menu.

If you have chosen OFF you have the possibility to switch off the lamp either direct at the **YPOC 700** in the Lamp menu or switch off the main switch.

3.9.4 DMX Input [DMX1]

```
DMX1
```

Readout DMX values of each channel received by the fixture. Use the **Up/Down**-keys to select desired channel and press **Enter** to read its value.

Function	Value	Remark
PAN	000 - 255	Pan Position
TILT	000 - 255	Tilt Position
COL1	000 - 255	Color wheel 1
COL2	000 - 255	Color wheel 2
GOB1	000 - 255	Gobo wheel 1
GRT1	000 - 255	Gobo wheel 1 rotation
GOB2	000 - 255	Gobo wheel 2
GRT2	000 - 255	Gobo wheel 1 rotation
GOB3	000 - 255	Gobo wheel 3
SHUT	000 - 255	Shutter / Strobe function
DIMR	000 - 255	Dimmer
FOCU	000 - 255	Focus
ZOOM	000 - 255	Zoom
FRST	000 - 255	Frost
PRIS	000 - 255	Prism wheel (000 - 127) / Stop / Prism- Rotation
IRIS	000 - 255	Iris
SPEC	000 - 255	Lamp Off, Reset, ...
MOVE	000 - 255	Movement
SPED	000 - 255	Speed for Pan/Tilt

3.9.5 Display [DISP]

```
DISP
```

Use this function to choose between different display indications. Use the **Up/Down**-keys to select desired function and press **Enter** to confirm or **Mode** to cancel and return to the menu.

D ON	Display On/Off (If you've chosen OFF, the display will go out within 15 seconds after the last menu input. The next key touch will reactivate the display).
REV	Turn around the display. **Note:** You can also do this by pushing the **Up/Down**-keys at the same time.

3.9.6 Fixture Temperature [TEMP]

```
TEMP
```

This function allows you to read out the current temperature of the **YPOC**

700. Press **Enter** to confirm or **Mode** to cancel. Inside temperatures below 80°C are not critical. 80°C and more lead the lamp being switched off at a critical point. For a save operation the outside temperature should not exceed 45°C.

3.9.7 Fan Control (FANS)

FANS

By using this function you can choose between 4 types of fan speed operations. Use the **Up/Down**-keys to select desired function and press **Enter** to confirm or **Mode** to cancel and return to the menu.

HIGH	The cooling fan works continuously at max. speed.
REG	The fan automatically adapts its speed in order to control inside temperature of the fixture.
LOOF	The fan keeps the adjusted low speed until the temperature exceeds max. inside temperature, then the **YPOC 700** automatically **switch off** the lamp.
LOHI	The fan keeps the adjusted low speed until the temperature exceeds max. inside temperature, then the **YPOC 700** automatically **switch from low to high fan speed.**

In addition to these settings, you can set the fan speed to minimum via DMX (Special channel, DMX value 224..229). This will last until a temperature of 90° is reached → high speed fan will be activated.

3.9.8 Adjustments and Calibrations (ADJU)

ADJU

By this function you can adjust and calibrate the positions of the different effects, wheels and other motors. This can be necessary after a service or a repair work.

For this function is secured by a fixture code. This work should be done by authorized persons only.

Use the **Up/Down**-keys to select desired function and press **Enter** to confirm or **Mode** to cancel and return to the menu. Use now the **Up/Down**-keys to set the adjustment values and confirm once more with the **Enter**-key or cancel with the **Mode**-key.

Function	Value	Remark
ADJU	*CODE XXXX*	Adjustments in the internal setup are code protected (for authorized persons only).
CL1C	- 99 - + 99	Coarse adjustment of the Color wheel 1
CL1F	- 99 - + 99	Fine adjustment of the Color wheel 1
CL2C	- 99 - + 99	Coarse adjustment of the Color wheel 2
CL2F	- 99 - + 99	Fine adjustment of the Color wheel 2
GOB1	- 99 - + 99	Adjustment of Gobo wheel 1
GOB2	- 99 - + 99	Adjustment of Gobo wheel 2
GOB3	- 99 - + 99	Adjustment of Gobo wheel 3
SHSH	- 99 - + 99	Shutter moves pair wise open and close
SHOC	- 99 - + 99	Shutter moves pair wise parallel left and right
FR U	- 99 - + 99	Adjustment of the Frost filter A
FR O	- 99 - + 99	Adjustment of the Frost filter B
PRIS	- 99 - + 99	Adjustment of the Prism wheel
IRIS	- 99 - + 99	Adjustment of the Iris
FOCU	- 99 - + 99	Adjustment of the Focus
POFS	- 99 - + 99	Adjustment of the Pan-Offsets
TOFS	- 99 - + 99	Adjustment of the Tilt-Offsets
CLRE	Adjustments in the internal circuit.	
SPFS	- 99 - + 99	Speed fast - limits max. PAN speed to 70%
ARES	- 99 - + 99	Adjust Reset (wheels stand still after the reset)

3.9.9 Default Settings {DFSE}

DFSE

Press **Enter** to reset all fixture personalities (not the adjusted/calibrated functions) to the factory default values. On the display *OK* will appear to indicate that the defaults are now set.

Function	Display	Default Settings			
DMX Address	*D001*	*D001*			
Pan reverse	*RPAN*	*ON*	*OFF* ✓		
Tilt reverse	*RTLT*	*ON*	*OFF* ✓		
Automatic lamp on	*LAAU*	*ON*	*OFF* ✓		
Lamp on via DMX	*DLOF*	*ON* ✓	*OFF*		
Display	*DISP*	*D ON* ✓	*REV*		
Cooling fan	*FANS*	*HIGH*	*REG* ✓	*LOOF*	*LOHI*
Feedback	*FEED*	*ON* ✓	*OFF*		

3.9.10 Automatic position control / Feedback {FEED}

FEED

The **YPOC 700** is equipped with a automatic position correction (feedback)

for the Pan and Tilt movement. Use the **Up/Down**-keys to select *ON* if you want to enable the feedback function or *OFF* if you want to disable this function. Press **Enter** to confirm or **Mode** to cancel and return to the menu.

3.9.11 Correction of faults (*EFLG*)

| *EFLG* | (Function available for authorized persons only) |

3.10 Error and Information Messages

HEAT	This message appears if you try to switch on the lamp within 5 minutes after having switched it off (lamp still too hot). The message will appear on the display if the lamp doesn't strikes within 20 seconds. The fixture will store this command and automatically strike the lamp after 5 minutes.
IG E	When striking the lamp, the electronic ballast will examine whether the lamp is on or not. If the lamp does not strike within 20 seconds, the igniting sequence is broken off. Now approx. 2 minutes are waited until a renewed ignition attempt is started automatically. After the 3rd unsuccessful ignition attempt the sequence is completely stopped and the display reads "*IG E*" (Ignition error).
LAER	As soon as the lamp ignited correctly, the lamp current is constantly supervised by the system. If an interruption steps on (covers opened or lamp damaged), the power is switched off immediately. The display reads "*LAER*" (lamps error). Please switch off the power supply and solve the possible problem.

After the error "*IG E*" respectively "*LAER*" it is not anymore possible the start the lamp via Shutter = 255. Nevertheless if a renewed ignition attempt is desired, first run a Reset (at the fixture or via DMX). Afterwards you can try again to strike the lamp.

OTMP	This error message informs you that the fixture was overheating and that the relay switches off the lamp. Pleas look for possible reasons (fan faulty, air in/outlets blocked or very dirty, lamp broken or very old, too high ambient temperature). Switch off the power and solve the possible problem before switching on again.
RSER	This message informs you that one of the fixture function wasn't able to do its reset correct (magnetic sensor, stepping motor, driver on the PCB, cables, etc.). Repair the defect and start the fixture again.
MD E	The **YPOC 700** has an automatic detector for the optical module (from software version 1.28). It detects whether the **YPOC 700** is equipped with a standard Spot module (*YSDT*) or a CMY module (*YCMY*). In case the module is not correctly mounted or has a defect, the display will read *MS E* (Module Error)

4 DMX Channel Selection (DMX Protocol)

Channel	Function	Time and Value	DMX	HEX	%
1) PAN-coarse	0 .. 530°	min. 2,65 s	0..255	00..FF	0..100
2) PAN-fine	High- Pos ... High- Pos + 2,1° (16 Bit)		0..255	00..FF	0..100
3) Tilt-coarse	0 .. 285°	min. 1,8 s	0..255	00..FF	0..100
4) Tilt-fine	High- Pos … High- Pos + 1,1° (16 Bit)		0..255	00..FF	0..100
5) Color 1	open (fast)	Chaser from color to color max. 140 BPM => 0,43 s	0..1	00..01	0,2
	open / color 1 (fast)		2..3	02..03	1,0
	color 1, red (fast)		4..5	04..05	1,8
	color 1 / color 2 (fast)		6..7	06..07	2,5

5 Changing the Lamp

For a frictionless operation pleas read this chapter carefully and follow all instructions.

5.1 Safety Regulations

- **Pull out the main plug!**

- Wait min. 20 minutes after the last operation to cool down the fixture.

- For a safe and convenient operation the head can be locked in various positions. Please unlock the head before switching on again.

- Don't touch the bulb of the lamp with bare fingers (this can cause damages).

- Before you put the **YPOC 700** into operation close the casing, otherwise your retina can be hurt!

5.2 Realize the Lamp Change

1. **Pull out the main plug!**

2. The lamp can be changed in a very comfortable way directly from the backside of the case without opening the head.
3. Open the four quick release fasteners (1, 2, 3 and 4) of the backside lamp sheet and remove it carefully.

4. Remove the old or broken lamp from the two sidewise lamp clip fasteners. **Attention:** The glass bulb of the lamp can splinter. For that reason remove the lamp with safety gloves or some cloth.

5. Put in the new lamp securely with a tight fit into the socket (2x clip fasteners). The lamp filler neck must be towards the backside of the reflector. **Attention:** Use only original lamp types!

6. Pull the lamp holder sheet safely back in the shaft and close the four quick release fasteners.

7. The running time of the lamp *LA1* can be reseed in the *TIME* Menu.
5.3 *Adjusting the lamp position (Hotspot)*

You should adjust the lamp position after each lamp exchange. This is necessary because each lamp has small fabrication variations and the illumination and imaging of the fixture can be not optimal. For this purpose the YPOC is equipped with an adjustment system of the lamp, consisting of two set screws on the backside lamp sheet (set screw A and B). The lamp adjustment is a matter of the users taste but will best be done as follows:

1. Move lamp with set screw B forewords/backwards until a very bright luminous spot (hotspot) can been seen best.

2. Move lamp with set screw A upward/downwards until this hotspot is in the center of the illumination.

3. Use again set screw B to move lamp forewords/backwards until you've

reached the most even illumination. Note: A slide hotspot will always remain and is conditional to the optical system.

6   Optical plug-in module (inside the fixture)

The **YPOC 700** is equipped with an optical plug-in which can removed completely. This allows you a very comfortable and fast way to do all types of services inside the fixture like as changing gobos and colors, cleaning or maintenance. Please apply for this the following procedure:

6.1   Safety regulations

- **Pull out the main plug!**

- Wait min. 20 minutes after the last operation to cool down the fixture.

- For a safe and convenient operation the head can be locked in various positions. Please unlock the head before switching on again.

- Don't touch the bulb of the lamp with bare fingers (this can cause damages).

- Before you put the **YPOC 700** into operation close the casing, otherwise your retina can be hurt!

6.2   Taking out and opening optical plug-in

4x 90°

1) Please lock the head for a safe and convenient operation.

2) Open the upper shell of the head casing by loosening the 4 quick release fasteners. Two on the front side and 2 on the back side of the head. Hang out the head safety.

3) Disconnect the right "Data Bus" cable from the circuit board of the plug-in. This is the only connection which needs to be removed.

Data Bus

2x
4) Open the two locking screws one on the left and one on the right side by 1-2 turns (it is not necessary to remove them completely). Press them inwards to open the lateral locking and pull out the plug-in carefully. The plug-in is lead by two lateral tracks. A moderate effort is normal when pulling out.

   Attention: Don't use sensitive components like optical devices, Gobo- and Color wheels or cables to remove the plug-in. You can use the metal plates or the stepping motors instead.

5) Please remove the optical plug-in now completely and put it carefully down.

6) Open the three knurled screws lying on the central axis of the plug-in. There are further knurled screws on the module which do not have to be open for changing Gobos or Color filters.
7) Open the module and put it on the backside down. You can now reach all Gobo- or Color wheels.
8) Realize the exchange or service as desired → see following chapters below.

9) Fold up the module again and screw up the three knurled screws by hand.

10) Insert the plug-in back to the fixture and the two lateral tracks. Push it carefully down until the two locking screws snap in. Close them hand-screwed.

11) Connect the "Data Bus" cable with the corresponding socket again.

12) Close the **YPOC 700** in reverse order.

6.3   *Changing Gobos and Color filters*

The is **YPOC 700** equipped both with Aluminum- and Glass gobos (outside diameter 27 mm, image size 23 mm). When using customized Gobos like company logos and writing the recommended image size is 20 mm. You can use either Aluminum (thickness = 0.3 mm) or glass gobos (thickness = 1.1 - 3.0 mm).

There are two Gobo wheels with rotating Gobos and one with fixed Gobos. All Gobos as well as the Color filters can be exchanged as desired.

6.3.1   *General remarks for changing Gobos and Colors*

All Gobos, Color filters or other optical effects do have a dedicated mounting direction. To prevent undesired damages and to optimize the optical illustration, all effect should be mounted with their reflecting side in

the direction of the lamp. This means for:

a) Aluminum Gobos must be mounted with their unpainted side toward the lamp. The black painted side in the direction of the front lens.
b) Glass Gobos must be mounted with their reflecting side toward the lamp. For Gobo holder this is already set in advance. In case you would like to exchange also them (e.g. to use customized Gobos with company logos etc.) you should make sure that also here the reflecting side is in the direction of the lamp. But this is not always very simple so please apply the following test.

Hold for example a pencil directly in front of the Gobo. If this is the uncoated side of the Gobo you will see a small distance (thickness of the Glass Gobo) between the mirror image and the pencil → This is the reflecting side which should be mounted towards the lamp.
Attention: Customized Gobos like company logos and writing do also have a right reading assembly direction so that they are not right-left-reversed. The readably side must in any case mounted towards the lamp. To have here also the reflecting side at the same moment the Gobos must be fabricated accordingly. Please instruct your Gobo supplier accordingly.
c) Glass Gobos with a structured surface must be mounted with the structured surface towards the lamp and the flat side towards the front lens.
d) Color filter are already pre-mounted on the color filter holder which guarantees the correct assembly. No further measures are necessary.

### 6.3.2 Changing rotating Gobos

1) The fixture is open as described above. The optical plug-in module is taken out and opened as well.

2) Press the Gobo holder at the outer part of the wheel carefully out of the hub. Pull it softly out of the central spring-holder jig.

3) Now the Gobo itself can be exchanged inside the Gobo holder if desired. Remove the centric spring with a small screwdriver or a gripping pliers. Change the Gobo and put the spring in again. But, it is much more comfortable if the complete Gobo holder is exchanged. Gobo holder are available as accessories.
4) Pull the Gobo holder back into the central spring-holder jig in the the middle of the Gobo wheel and snap it in. You can open the central spring-holder with a bent screwdriver through a hole from the opposite side of the wheel.

5) Push the Gobo holder in the dedicated hub.

    Attention: There must be no gap between the Gobo holder and the wheel afterwards. Check for a tight fit.
6.3.3 Changing fixed Gobos

**1) The fixture is open as described above. The optical plug-in module is taken out and opened as well.**

2) Fixed Gobos can be directly pulled out from the two Gobo lateral springs. You can also use a small screwdriver to lift the two springs carefully.

3) Exchange the Gobo and insert the new one under the two lateral holding springs.

Attention: Please make sure that the Gobo fits tight between the tree concentric noses.
Note: Fixed Gobos made of Aluminum are very thin and bendable. Twisted Gobos are causing out of focus images. Make sure that the inserted Gobos are plain and unbend.

Gobo wheel 1 with rotating Gobos

Gobo wheel 2 with rotating Gobos

Fixed Gobo wheel 3

6.3.4 Changing Color filters

1) The fixture is open as described above. The optical plug-in module is taken out and opened as well.

2) Pull the Color filter holder carefully out of the central spring-holder jig. Use for example a small flat-noses pliers or do it by hand.

   Note: This will work best if the two "open" positions are overlapping.

3) Exchange the complete Color filter holder and pull it back into the central spring-holder jig. You can also use a small screwdriver to lift the spring carefully.

   Attention: Please make sure that the Color filter holder is snapped in and fits tight.

7 Maintaining and Cleaning the YPOC 700

It is absolutely essential that the fixture is kept clean and that dust, dirt and smoke-fluid residues must not built up on or within the fixture. Otherwise the fixture's light-output will be significantly reduced or damages can occur. Regular cleaning will not only ensure the maximum light-output, but will also allow the fixture to function reliable throughout its life.

A soft lint-free cloth moistened with any good glass cleaning fluid is recommended, under no circumstances should alcohol or solvents be used!

The inside optical system should be maintained only by authorized persons. Please contact your local dealer.

7.1 Safety Regulations

- **Pull out the main plug!**
- Wait min. 20 minutes after the last operation to cool down the fixture.
- Before you put the **YPOC 700** into operation close the casing, otherwise your retina can be hurt!

7.2 Circumference and Interval (rule-of-thumb)

The contamination of the fixture depends on the environment details. Therefore no general guidelines can be given. Therefore the intervals given are only suggestions from our practice experience.

Position	Interval	In this way
Outside optic	weekly	soft cloth and glass cleaning fluid
Color filter	monthly	soft cloth and glass cleaning fluid
Gobos	yearly	vacuum cleaner, airbrush, etc.
Glass gobos	monthly	soft cloth and glass cleaning fluid
Prism	monthly	soft cloth and glass cleaning fluid
Dimmer/Shutter/Iris	yearly	vacuum cleaner, airbrush, etc.
Inside lens	monthly	soft cloth **no** glass cleaning fluid
Fan and air channel	monthly	vacuum cleaner, airbrush, etc.
Reflector	**never**	
Lamp	**never**	
Moveable parts	yearly	suitable fatty oil

Attention:

- **Never let optical parts come into contact with oil or fat.**
- **Before running the fixture wait until all parts are dried up.**
- **Clean lenses only with dry clothes. Never use water or other cleaners.**
- **Change lenses if they look milky. For that please contact your local dealer.**

7.3 Cleaning the Optical System

1. **Pull out the main plug!**
2. Wait min. 20 minutes after the last operation to cool down the fixture.
3. Open the upper shell of the head casing by loosening the 4 quick look fasteners. Two on the front side and two on the back side of the head.
4. Do the work as explained in the list above.
5. Before you put the **YPOC 700** into operation close the casing, otherwise your retina can be hurt!

8 Technical Specification

Power supply	
Power consumption	~90 - 260V, 50 - 60 Hz 1000 Watt, 4.5 A, electronic ballast, (blind current compensated)
Fuse protection	Lamp: T 5A, 250V, 5x20 mm (fine-wire fuse) Electronic: T 1A, 250V, 5x20 mm (fine-wire fuse)

Lamp	
Type	HTI 700-DE (OSRAM, SharXS)
Live time	750h
Color temperature	7500k
Luminous flux	59.000 lm

Optical system
Dichroic coated glass reflector
Beam angel 14° - 32°
Lenses hardened and tempered, anti-reflex coated

Colors (8/16 Bit)
Color wheel 1: 8 dichroic filters plus white, 9 half colors
Color wheel 2: 8 dichroic filters plus white, 9 half colors, 1x CTC 5500, 1x CTC 3200

Gobos (8/16 Bit)
Gobo-wheel 1: 7 exchangeable rotating gobos plus "open"
Gobo-wheel 2: 7 exchangeable rotating gobos plus "open"
Gobo-wheel 3: 9 fixed exchangeable standard gobos plus "open"
Gobo outside diameter 27 mm, image size 23 mm. For customized Gobos like company logos and writing the recommended image size is 20 mm
All gobos as aluminum or glass Gobos exchangeable, 11 spare Gobos
Gobo thickness: glass = 1.1 - 3.0 mm, aluminum = 0.3 mm

Shutter / Strobe / Dimmer (8/16 Bit)
Strobe- effect with variable speed 1 - 10 flashes per second
Continuously mechanical dimmer 0 - 100%

Prism (8/16 Bit)
Rotating 3-face prism, rotating and variable in speed

Focus (8/16 Bit)
Motor driven focus from near (2 m) to far away

Iris (8/16 Bit)
High-Speed Iris 100% - 4% (0,2 Sec. opening time)

Zoom (8/16 Bit)
Zoom range 14° - 32°

Drive
Standard USITT DMX-512, 3 pole XLR; [+] = Pin 3 [-] = Pin 2 [Ground] = Pin 1.
The DMX- addressing starts at the DMX- address [001].

Pan / Tilt	
Pan- movement	**530° in max. 2.65 seconds, 16 bit resolution**
Tilt- movement	**280° in max. 1.68 seconds, 16 bit resolution**

Weights and measures	
Width of the base	**490 mm**
Length of the base	**380 mm**
height (head vertical)	**646 mm**
Weight (net)	**28.5 kg**
